Non-linear Interactions between Niño region 3 and the Southern Amazon

Antônio M de T Ramos, Alejandro Jaramillo, German Poveda, Elbert Macau, Jürgen Kurths and Nobert Marwan

December 2016
Outlines

1. We present a new tool called *Recurrence Measure of Conditional Dependence* (RMCD) to investigate causality.

2. RMCD is based on recurrence properties of the system.

3. We show the efficiency of RMCD to establish temporal causal link by testing different coupled models and real data.
Recurrence Matrix

(a) reconstructed phase space

\[ R^X_{ij} = \Theta (\varepsilon - \| x_i - x_j \|), \quad i, j = 1, \ldots, N, \quad (1) \]

\[ R^{X,Y}_{ij} = R^X_{ij} R^Y_{ij} = \Theta (\varepsilon_X - \| x_i - x_j \|) \Theta (\varepsilon_Y - \| y_i - y_j \|). \quad (2) \]
Recurrence Plot

Norbert Marwan, M. Carmen Romano, Marco Thiel, Juergen Kurths Recurrence plots for the analysis of complex systems; Physics Reports 438, 5–6, pag. 237 (2007)
Probability of Recurrence

\[
\begin{pmatrix}
1 & 0 & 1 & 0 & 1 & 0 & 0 & 1 & 0 & 0 \\
0 & 1 & 0 & 1 & 0 & 1 & 0 & 0 & 1 & 0 \\
1 & 0 & 1 & 0 & 1 & 0 & 1 & 0 & 0 & 1 \\
0 & 1 & 0 & 1 & 0 & 1 & 1 & 0 & 0 & 0 \\
1 & 0 & 1 & 0 & 1 & 0 & 1 & 1 & 0 & 0 \\
0 & 1 & 0 & 1 & 0 & 1 & 0 & 0 & 1 & 0 \\
0 & 0 & 1 & 1 & 1 & 0 & 1 & 0 & 0 & 1 \\
1 & 0 & 0 & 0 & 1 & 0 & 0 & 1 & 0 & 0 \\
0 & 1 & 0 & 0 & 0 & 1 & 0 & 0 & 1 & 0 \\
0 & 0 & 1 & 0 & 0 & 0 & 1 & 0 & 0 & 1 \\
\end{pmatrix}
\]

Probability of Recurrence at a given time \( i = 2 \)

\[
p_i(X) = \frac{1}{N} \sum_{j=1}^{N} R_{ij}^X = \frac{3}{10}.
\] (3)
Transfer Entropy approach

Transfer Entropy is the reduction in the uncertainty of the past of $X$ due to the knowledge of the present of $Y$ when the past of $Y$ is given.

$$I_{X \rightarrow Y} = I(X^\tau; Y|Y^\tau) = H(X^\tau, Y^\tau) + H(Y, Y^\tau) - H(Y^\tau) - H(X^\tau, Y, Y^\tau).$$

$$H(\cdot) = - \sum_{k=1}^{n} p_k(\cdot) \log_2 p_k(\cdot)$$

Antônio M de T Ramos, Alejandro Jaramillo, German Poveda, Elbert Macau, Jürgen Kurths and Nobert Marwan
Recurrence Measure of Conditional Dependence

Following the definition of Transfer Entropy, Recurrence Measure of Conditional Dependence is defined as

\[
\text{RMCD}(X^\tau, Y|Y^\tau) = \frac{1}{N} \sum_i \left[ \frac{1}{N} \sum_j R_{ij}^{X^\tau,Y,Y^\tau} \log_2 \left( \frac{\sum_j R_{ij}^{X^\tau,Y,Y^\tau} \sum_j R_{ij}^{Y^\tau,Y^\tau}}{\sum_j R_{ij}^{X^\tau,Y^\tau} \sum_j R_{ij}^{Y,Y^\tau}} \right) \right].
\]

(6)
Coupled ARMA[53] Model

\begin{align*}
x_i &= \frac{4}{25} \sum_{k=1}^{5} x_{i-k} + \frac{4}{25} \sum_{k=1}^{3} \xi_{i-k}^x \\
y_i &= \frac{4}{25} \sum_{k=1}^{5} y_{i-k} + \frac{4}{25} \sum_{k=1}^{3} \xi_{i-k}^y + \eta x_{i-15}
\end{align*}  \tag{7}

where \( \eta = 0.9 \) is the coupling parameter and \( \xi \) is an uniformly distributed random number.

Embedding parameters: dimension 2 and delay 9. 100 twin surrogates are used.
Coupled Logistic Map

\[
\begin{align*}
    x_i &= (1 - \eta)rx_{i-1}(1 - x_{i-1}) + \eta y_{i-15}, \\
    y_i &= (1 - \eta)ry_{i-1}(1 - y_{i-1}) + \eta x_{i-15}.
\end{align*}
\]

where the coupling or migration parameter is \( \eta = 0.5 \) and the growth rate is \( r = 3.7 \)

Embedding parameters: dimension 2 and delay 1. 100 twin surrogates and 100 runs.

Hastings, *Complex Interactions Between Dispersal and Dynamics*, Ecology, 1993
Coupled Lorenz Model

\[
\dot{x}_i(t) = \sigma [y_i(t) - x_i(t)], \\
\dot{y}_i(t) = r x_i(t) - y_i(t) - x_i(t)z_i(t) + \sum_{j \neq i} K_{ij} y_j^2(t - \tau_{ij}), \\
\dot{z}_i(t) = x_i(t)y_i(t) - b z_i(t),
\]

with \( i, j = 1, 2 \) and Lorenz systems parameters are \( \sigma = 10, r = 28, b = 8/3; \) the coupling parameters are \( k_{21} = 1.2 \) and \( k_{12} = 0, \) this way 1 influences 2 but not the other way around.

Embedding: dim. 3 and delay 1, lag of between 1 and 2 is 1 unid. time. 200 twin surrogates and 10 runs.

Extreme Events in Amazonia

• Drought in 2005 and 2010

Extreme Events in Amazonia

How long does it take for an anomalous temperature in the Ocean causes an anomaly in the precipitation of Amazon?

What are the differences between the droughts of 2005 and 2010?
Real Data

Time lag influence of temperature anomaly of the Pacific Ocean (ENSO30) over the precipitation anomaly in the South Amazon during 2005.
Real Data

Time lag influence of temperature anomaly of the Pacific Ocean (ENSO30) over the precipitation anomaly in the South Amazon during 2010.
